

RTCFR Framework for Better Prompting

Role + Task + Context + Few-shot + Response

RTCFR is a simple prompt framework that helps you get clear, structured, and useful answers from AI tools like ChatGPT, Claude, Gemini, and AI agents.

Important: RTCFR is not only for user prompts. It is also useful for system prompts, developer instructions, AI agent prompts, and tool-use prompts.

Where RTCFR Can Be Used

Prompt Type	How RTCFR Helps
System Prompt	Defines the AI assistant behavior, rules, tone, boundaries, and default output style. RTCFR makes the assistant consistent.
User Prompt	Helps the user ask clearly with role, task, context, examples, and response format for a specific output.
Tool Prompt	Useful when an AI agent uses tools like Gmail, Google Sheets, n8n, browser, calculator, or database tools. RTCFR tells the agent when and how to use tools.
Agent Workflow Prompt	Useful for n8n, CrewAI, LangGraph, AutoGen, or custom agents where the AI must follow a process step by step.

Teaching line for YouTube: RTCFR is not just a prompt writing method. It is a prompt engineering structure for system prompts, user prompts, and AI agent tool-use prompts.

System Prompt Use Case Example

A system prompt is the base instruction that controls how the AI should behave before the user asks anything. It is not a one-time request. RTCFR helps you define the assistant clearly.

- **R - Role:** You are a senior AI automation assistant.
- **T - Task:** Help users build n8n workflows step by step.
- **C - Context:** Users are beginners from a Tamil audience learning practical automation.
- **F - Few-shot:** Use examples like Google Sheets to Gmail, form to ticket system, and lead capture automation.
- **R - Response:** Always give workflow steps, required nodes, sample prompt, and error handling.

1. R - Role

Definition

Role means telling AI who it should act as. It gives the AI the right expertise, tone, and thinking style.

Real Use Case Example

Act as a senior AI automation consultant.

Why it works: The AI answers with the mindset of an automation expert.

2. T - Task

Definition

Task means clearly telling AI what you want it to do. A clear task avoids vague answers.

Real Use Case Example

Create a 5-minute YouTube video script explaining AI agents for Tamil business owners.

Why it works: The task is clear: create a 5-minute video script.

3. C - Context

Definition

Context means giving background information like audience, purpose, current situation, tools, data, or constraints.

Real Use Case Example

Students submit doubts through Google Forms. The data goes to Google Sheets. An email should be sent to the internal support team as a ticket.

Why it works: The AI understands the real workflow, not just a generic email request.

4. F - Few-shot

Definition

Few-shot means giving examples of the style, pattern, or output you want. AI follows the pattern from your examples.

Real Use Case Example

Style examples:

1. I Built an AI Agent in Tamil - Full Beginner Guide
2. n8n Automation kathukkanuma? Start Here!
3. AI Tools vaithu Business Automation pannalam!

Why it works: The AI will generate titles in the same Tamil + English YouTube style.

5. R - Response

Definition

Response means telling AI how the final answer should be formatted, such as table, bullets, JSON, checklist, or script.

Real Use Case Example

Give me the output in this format:

1. Summary
2. Step-by-step workflow
3. Required tools
4. Final prompt
5. Common mistakes

Why it works: The output becomes organized and ready to use.

Final Combined Prompt Examples

Final Combined Prompt - System Prompt Example

Use this when creating a custom GPT, AI assistant, AI agent, or n8n AI Agent system message. A system prompt defines the assistant behavior, rules, and default style.

You are a senior AI automation assistant for Tamil beginner learners.

Your task is to help users design, debug, and improve n8n workflows, AI agents, and business automation systems.

Context:
The users are mostly beginners. They need practical, step-by-step guidance. They may use tools like Google Sheets, Gmail, Telegram, WhatsApp Business API, OpenAI, Claude, Gemini, and webhook-based automations.

Few-shot examples of good explanations:

- First explain the concept in simple words.
- Then give the exact nodes or tools needed.
- Then give the workflow steps.
- Then provide a ready-to-copy prompt or template.

Response rules:

1. Use simple English or Tanglish when useful.
2. Give practical examples, not only theory.
3. Ask clarifying questions only when required.
4. For workflow requests, always include nodes, data flow, prompt, and error handling.
5. Keep the output structured with headings, bullets, and copy-ready blocks.

RTCFR Breakdown - System Prompt

RTCFR	System Prompt Meaning
R - Role	Senior AI automation assistant for Tamil beginner learners
T - Task	Help users design, debug, and improve workflows and agents
C - Context	Beginner Tamil audience using n8n, Gmail, Sheets, APIs, and AI tools
F - Few-shot	Good explanation pattern: concept -> nodes -> steps -> template
R - Response	Structured headings, bullets, copy-ready blocks, error handling

Final Combined Prompt - User Prompt Example

Use this when you are asking ChatGPT, Claude, or Gemini to create one specific output. A user prompt is usually a single request from the user.

Act as a senior automation consultant and professional email copywriter.

I want to create a clean ticket system email template for student doubts submitted through Google Forms.

Context:
Students submit their doubts through a form. The data is stored in Google Sheets. Whenever a new doubt is submitted, an email should be sent to our internal support team.

Available fields:
Name: {{ \$json.Name }}
Gmail ID: {{ \$json['Gmail ID'] }}
Mobile Number: {{ \$json['Mobile Number'] }}
Batch Number: {{ \$json['Batch Number'] }}
Doubt: {{ \$json.Doubt }}
Steps Taken: {{ \$json['Steps Taken'] }}

Example style:
Subject: New Support Ticket Received - Batch 12
Tone: Professional, clean, support-ticket style
Format: Easy to read, with clear sections

Give the response in this format:

1. Email subject line
2. HTML email template
3. Plain text version
4. Short WhatsApp/Telegram message version

RTCFR Breakdown - User Prompt

RTCFR	User Prompt Meaning
R - Role	Senior automation consultant and professional email copywriter
T - Task	Create a clean ticket system email template
C - Context	Google Forms to Google Sheets to internal support email workflow
F - Few-shot	Sample subject style, tone, and formatting guidance
R - Response	Subject line, HTML template, plain text version, and short message version

Final Combined Prompt - Tool-Use / AI Agent Example

Use this when an AI agent needs to work with tools. This is useful in n8n AI Agent, LangGraph, CrewAI, or custom tool-calling systems.

Role:

You are an AI support ticket assistant.

Task:

Read new student doubt submissions from Google Sheets, create a professional ticket summary, and send it to the support team by Gmail.

Context:

Each row contains name, email, mobile number, batch number, doubt, and steps already taken by the student. The support team should quickly understand the issue and respond.

Few-shot example:

Ticket Title: Doubt from Batch 12 - Python Error

Priority: Medium

Summary: Student is facing an error while running Python code.

Next Action: Support team should review the error and reply with debugging steps.

Response / Tool-use rules:

1. Use Google Sheets only to read the submitted row.
2. Use Gmail only after creating the ticket summary.
3. Do not invent missing student details.
4. If doubt or contact details are missing, mark the ticket as incomplete.
5. Final output should include ticket title, priority, summary, student details, and next action.

Final Teaching Summary

- R means Role - tell AI who it should act as.
- T means Task - tell AI exactly what to do.
- C means Context - give background information.
- F means Few-shot - show examples of the output style.
- R means Response - tell AI the output format.

Main YouTube line: Normal prompt gives normal answer. RTCFR prompt gives professional output.

Important upgraded line: RTCFR works for user prompts, system prompts, and tool-use prompts. This is why it is powerful for Custom GPTs, n8n AI Agents, and business automation workflows.
