Assignment 3 - JSON Prompting: Tamil Culture in Images and Video | learn. build. operate

1. What you will build

Use **JSON prompting** to generate images and short videos that celebrate **Tamil culture**. JSON prompting means writing your prompt as a structured set of fields (subject, setting, style, colours, mood, and so on) instead of one plain sentence. This gives you far more control over the result and makes your prompts easy to reuse and fine-tune.

Type: Creative Prompt Engineering · Tools: any image and video generation model that accepts text prompts

2. Your task

Write structured **JSON prompts** and use them in an image and video generation tool to produce visuals that authentically represent Tamil culture. You will create a few images and at least one short video, each driven by its own JSON prompt.

3. JSON prompt structure

Instead of one plain sentence, describe what you want as a set of labelled fields written in JSON. Typical fields cover the subject, the setting, the visual style, the colour palette, the lighting, the mood, the composition, and the aspect ratio. For a video, add fields for the motion and a short duration. Keeping the same fields across prompts makes them easy to reuse and fine-tune.

4. Requirements

- Write your prompts as well-formed JSON, one prompt per image or video.
- Generate at least **three images** and at least **one short video**.
- Every output must represent Tamil culture clearly and respectfully.
- Keep your JSON fields consistent so the prompts are easy to reuse and adjust.
- For the video prompt, include the motion and a short duration.

Ideas to explore (pick your own)

Bharatanatyam dancer mid-pose; a kolam being drawn at dawn; Pongal celebration with the traditional pot and sugarcane; the gopuram of a temple such as Meenakshi Amman; Tanjore painting style; nadaswaram and thavil musicians; Kanchipuram silk weaving; Madras filter coffee in a davara tumbler; Marina beach at sunrise. Choose themes you can portray accurately, and avoid stereotypes.

5. Expected output

A small set of generated images and at least one short video, each clearly tied to the JSON prompt that created it. Keep the JSON prompt next to its result so the link between prompt and output is

obvious.

6. What to submit

- Submit everything in **WhatsApp** only.
- Send your JSON prompts together with the images and the short video they generated.

Reminder: the skill being graded is your JSON prompting. Write the prompts yourself - the structure and ideas above are your guide, not the finished answer. Represent Tamil culture with care and respect. Good luck!
